Invitation Letter for the International Digital Energy Expo 2024

From June 29 to July 2, 2023, Shenzhen hosted the world's first International Digital Energy Expo at the Convention and Exhibition Center, with the overarching theme of digital energy. The expo comprehensively showcased cutting-edge technologies, demonstrative applications and achievements in the global digital energy field across multiple scenarios. The event attracted participation from over 100 countries and regions, 407 leading digital energy enterprises, and nearly 2,000 energy scholars, think tank experts, and global energy industry leaders. With over 68,000 professional visitors in attendance, the expo successfully established itself as a top-tier, high-caliber industry event in the digital energy domain.

To further propel the development of the digital energy industry and deepen exchange and collaboration with countries worldwide in this field, the International Digital Energy Expo 2024 is scheduled to be held from September 8 to 11, 2024, at the Shenzhen Convention and Exhibition Center. Spanning

approximately 50,000 square meters, the expo will feature dedicated exhibition areas highlighting energy storage, innovative power systems, renewable energy, core components for energy storage, digital empowerment, and integrated energy services, among others. It will serve as a platform to unveil new products, technologies, business models, and paradigms. A series of thematic forums will be organized, centering on topics such as the digital energy industry, modern power systems, digitalization of renewable energy, core components, energy storage technologies, industry investment and financing, the role of digital technologies in catalyzing the energy transition, and international investment summits. The expo will also feature major achievement release conferences, digital energy salons, and other themed activities. Key announcements will include Shenzhen's Blueprint for Constructing a Pioneering City of Digital Energy, Integrated Platform 2.0 of Power Storage, Charging and Discharging, Virtual Power Plant Management Platform 3.0, and the development of ultra-fast charging infrastructure

We sincerely invite relevant organizations, enterprises, groups, and individuals to partake in the International Digital Energy Expo 2024. Participation can take various forms, including exhibiting your offerings, attending conferences, organizing delegations, or engaging in business collaborations.

By facilitating exchanges and creating synergy among upstream and downstream players along the industry chain, we can collectively contribute to establishing the expo as a top-tier brand in the digital energy field while promoting the convergence of innovation-friendly elements such as knowledge, technology, capital, and services, thereby fueling the growth of the digital energy industry.
